

**Performance Tuning Tips
Compiled by Critical Path Software Inc.**

www.cpsigroup.com

All of these JCL Tuning TIPS were submitted from various sources and should be tested prior to use.

TSO TUNING TIPS

- Disable your ISPF/PDF LOG dataset.
- Use the BROWSE command instead of the EDIT command when viewing large datasets.
- Stack commands whenever possible.
- Maintain JCL and input DATA in separate datasets (or members).
- Use line commands with a number or block commands to reduce interaction.
- Use TEXT handling commands (TS, TF, and TE) when working with text.
- Avoid "Max Scroll" on large outputs in SDSF.
- Additional TSO Tuning Tips can be found at:
<http://www.lascon.co.uk/d002003.htm>

Do you have a TSO TUNING TIP that we can put here?

Please send us an e-mail. It will help others.

Send to: Ralph@cpsigroup.com

Additional TIPS are posted on <http://www.linkedin.com/pub/ralph-bertrum/b/24a/471>

If you send your e-mail address I will send them to you every time they are updated. The JCL, COBOL, DB2, CICS, VSAM, SMS, and TSO TIPS will all be sent. All of the TIPS have been sent in from donors so please test them. If you ever have a performance problem give me a call. We do a free no charge no obligation analysis.

Very Best Regards,
Ralph E. Bertrum
